Hi Lorie,

I don't think the permit branch's records have specifically what you're looking for. Probably the closest document I could find was a review memo for an Exide plan approval from 2012, which includes some lead emission rates. Let me know though if it would be helpful for me to reach out to Pennsylvania to see if they have or could get that info.

Thanks,

**Subject:** Exide Laureldale/Reading Question

Hi all,

Pat Flores had recommended that I get in touch with Paul or Howard who may have some information on the Exide Laureldale/Reading facility. I'm cc'ing Eugenia and Meighan who Howard had on his out of office message.

We're preparing documentation to list the Exide site on the Superfund National Priorities List, and as part of our listing process, we are trying to gather data to show an air release of lead to the community either through stack or fugitive emissions. I came across the attached report on secondary smelters and it lists the Exide facility as part of their study. Was anyone from R3 involved in this study and would we have the monitoring data in-house that was used in this report? We would be looking for the actual monitoring data from the two monitors, not just a table or summary, any QA/QC reports that explain how the data from the monitors were analyzed, location of the monitors and evaluation of the results.

Also, if there is any other info the air program has on Exide relating to ambient air monitoring or modeling done in-house that would document an off-facility release, we'd love to see it. Since this report was done in 2012, I'm hoping there might be electronic files, but if not, if the hard copies can be re-called, we have a contractor who would be able to review the info.

Thanks for any help you could offer!

Lorie
